

Know What's In Your Waterbody.

Verify Treatment Performance

Treatment concentrations can change over time due to water movement, dilution, and environmental conditions. Monitoring helps confirm products are performing as expected and supports informed water-use and management decisions.

Treatment Concentration Monitoring confirms the concentration of products such as Renovate®, Renovate Max G®, Sculpin G®, Navigate®, Sonar®, ProcellaCOR®, Oasis®, Clearcast®, Habitat®, Galleon®, as well as copper herbicides and algaecides. This testing helps evaluate treatment performance, supports permit and label compliance, and informs irrigation and water-use decisions.
